World-leading expertise to tackle health inequalities, understand ethnic health & deliver inclusive research

The Midlands has an international reputation for clinical research excellence which is open for all to engage with; a truly inclusive platform for knowledge sharing and innovation. We lead the world when it comes to academic ethnic health expertise and our work is pioneering in disease areas that disproportionately affect people due to their socioeconomic status, age, gender, ethnicity and other factors, such as diabetes, cardiovascular disease, inflammation, liver disease and respiratory conditions. We are also taking a leading role in supporting good mental health at work and reducing the stigma surrounding poor mental health.

Our region's expertise and leadership continues to drive inclusive investigation into diverse healthcare issues, showcased by our response to the pandemic when partners in the Midlands were the first to highlight the relationship between ethnicity and Covid-19 clinical outcomes. This strength is important in supporting the

Government's levelling-up agenda and post Covid-19 economic recovery plans; economic health and population health are inextricably linked.

Despite our region's wealth of expertise in so many sectors, it has been forecast that the Midlands will experience disproportionately high impacts from Covid-19, the European Union exit and imbalanced regional public sector investment. This makes levelling up and tackling regional differences in health life and life expectancy even more critical. The Midlands has, therefore, prioritised delivery of a Policy Commission to:

- Identify the critical issues underpinning health inequality
- Isolate those that are specific to the region
- Determine recommendations for change
- Influence key stakeholders nationally

"Coronavirus has reminded us all of the absolute value of good health as individuals and within communities. It has highlighted powerfully how significant the health, life sciences and medical technologies sectors are as economic cornerstones in our country.

"It is well known that there are inequalities in health across the UK; inequalities which have been exposed even further by the pandemic. The Midlands as a whole falls behind the UK average in terms of life expectancy and of course there are areas within our region that experience even greater health inequalities.

"If we are to truly level up the economy, we must also level up health and this must be part of our work to rebuild the economy post COVID-19."

Sir John Peace, Chairman, Midlands Engine

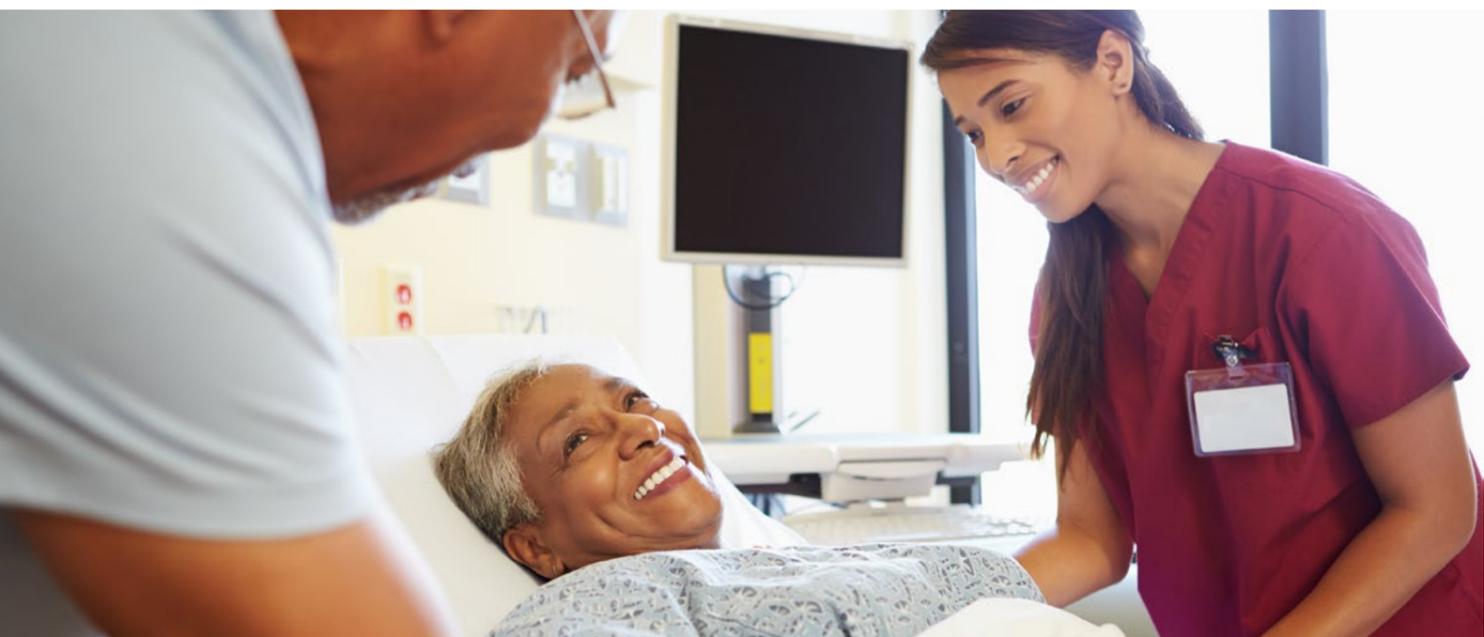

Regional differences in healthy life and life expectancy

Since 2010, the previously seen increase in life expectancy in England has stalled, something that has not happened since at least 1900. Health is closely linked to the conditions in which people are born, grow, live, work and age, and inequities in power, money and resources - the social determinants of health.

Life expectancy follows the social gradient - the more deprived the area, the shorter the life expectancy. This gradient has become steeper; in other words, inequalities in life expectancy have increased. There are marked regional differences in life expectancy, particularly among people living in more deprived areas. Among women in the most deprived 10% of areas, life expectancy fell between 2010-12 and 2016-18.

Differences both within and between regions have tended to increase. The gradient in healthy life expectancy is steeper than that of life expectancy. It means that people in more deprived areas spend more of their shorter lives in ill-health than those in less deprived areas. The amount of time people spend in poor health has increased across England since 2010. Inequalities in poor health harm individuals, families, communities and are expensive to the public purse.

The unique **Centre for BME Health** exists to reduce ethnic health inequalities. The focus is on supporting individuals and organisations in planning and undertaking research and healthcare delivery that involves and aims to understand the health needs and issues of ethnic minorities and seldom-heard communities.
